

Data sheet

Thermostatic expansion valve

Types TCAE, TCBE and TCCE

The TC thermostatic expansion valve has been developed and designed for soldering into hermetic refrigeration systems. It is manufactured in stainless steel and is therefore very suitable for installation in refrigeration systems for the food industry.

TC can be used in many different forms of refrigeration system, in particular:

- Mobile refrigeration equipment
- Air conditioning units
- Heat pump systems
- Refrigeration appliances
- Liquid coolers
- Ice cube machines
- Traditional refrigeration systems

All variants are available in both singlepacks and industrial packs as required by the customer.

TCAE with interchangeable orifice assembly and adjustable superheat.

TCBE with fixed orifice assembly and adjustable superheat.

TCCE with fixed superheat, otherwise it is identical with TCBE.

All types are straightway versions.

TCCE is manufactured to order, and consequently this technical leaflet contains no description of standard range and code numbers.

TC is also available in a range of variants that give countless valve combination possibilities.

Features

- *Bimetal connections*
 - Straightforward and fast soldering (no wet cloth or cooling pliers required)
- *Refrigerants*
 - R134a, R404A, R507, R407C, R22, R410A and future refrigerants
- *Capacities from 23 to 34 kW (6.5 to 9.8 TR) for R410A*
- *Stable regulation*
- *Biflow function (orifice 1 and 2)*
- *Compact design*
 - Small dimensions and low weight
- *Stainless steel, hermetically tight solder version*
 - High connection strength
 - High corrosion resistance
 - Capillary tube joints of high strength and vibration resistance
- *Laser-welded, stainless steel thermostatic diaphragm element*
 - Optimum function
 - Long diaphragm life
 - High pressure resistance
- *Stainless steel double contact bulb*
 - Straightforward and fast installation
 - Good heat transfer from bulb to pipe
- *Adjustable superheat type (TCAE/TCBE)*
 - Accurate setting
 - Adjustable in operation
- *Fixed superheat type (TCCE)*
- *Filter with high dirt retention capacity*
- *Available with self-cleaning bleed*
- *Available with MOP (Max. Operating Pressure)*

Thermostatic expansion valve, type TCCE, TCBE and TCAE

Standard range, TCAE	Versions available in the standard range: Ranges for R134a, R404A, R507, R407C, R22 and R410A: N -40 — +10 °C without MOP N -40 — +10 °C MOP + 15°C NM -40 — -5°C MOP + 0 °C <i>Ranges for R404A og R507</i> B -60 — -25 °C without MOP B -60 — -25 °C MOP -20 °C	<i>Static superheat (SS) for R134a, R404A, R407C, R22 and R410A</i> Valves without MOP: 5 K Valves with MOP: 4 K <i>Static superheat (SS) for R507</i> Valves without MOP: 6.4 K Valves with MOP: 5.4 K <i>Capillary tube length 1.5 m</i> <i>Connections:</i> Inlet $\frac{3}{8}$ in./10 mm $\frac{1}{2}$ in./12 mm Outlet $\frac{5}{8}$ in./16 mm
Standard range, TCBE	Versions available in the standard range: Ranges N -40 — +10 °C without MOP N -40 — +10 °C MOP + 15°C <i>Static superheat (SS) for R22, R134a, R404A, R407C, R410A</i> Valves without MOP: 5 K Valves with MOP: 4 K	<i>Static superheat (SS) for R507</i> Valves without MOP: 6.4 K Valves with MOP: 5.4 K <i>Capillary tube length: 0.9 m</i> <i>Connections:</i> Inlet Orifice 1 $\frac{3}{8}$ in./10 mm Orifice 1-3 $\frac{1}{2}$ in./12 mm Outlet $\frac{5}{8}$ in./16 mm
Variant range TCBE/TCCE	In addition to the standard range, TCBE valves are also available in these variants and variant combinations: <i>Ranges</i> NM -40 — -5 °C MOP 0 °C B -60 — -25 °C without MOP B -60 — -25 °C MOP -20 °C Valves to special temperature ranges can be supplied.	<i>Static superheat (SS)</i> 2K, 3K, 4K, 5K or 6K for both TCBE and TCCE. <i>Capillary tube length: 1.5 m</i> <i>Bleed: 15%</i> <i>Connections:</i> Inlet Orifice 2-3 $\frac{3}{8}$ in./10 mm Outlet Orifice 1-3 $\frac{1}{2}$ in./12 mm

Technical data	<i>Max. bulb temperature</i> 100 °C <i>Max. valve body temperature short-lived peak</i> 120 °C 150 °C <i>Max. working pressure</i> PS/MWP = 45.5 bar <i>Max. test pressure</i> Pf = 50 bar	<i>Biflow operation</i> With flow in the opposite direction, the rated capacity is reduced by up to 15%. TC with orifice no. 3, cannot be used for biflow operation.
-----------------------	--	--

MOP-Valves	To avoid charge migration when MOP valves are used, the bulb temperature must be lower than the thermostatic element temperature.

Thermostatic expansion valve, types TCAE, TCBE and TCCE

Identification

Main valve data is given on the element (fig. 1) on the valve body (fig. 2), or on the orifice assembly (fig. 3)

Valves with bleed are marked on the element or orifice assembly: BP 15 (=15% bleed of nominal capacity).

For valves with fixed superheat setting (type TCCE) the superheat is printed on the element (e.g. SS 5°C / 9°F).

Main valve data example, fig. 1

TCBE	= Type (E = external pressure equalisation)
068Uxxxx	= Code numbers
R407C	= Refrigerant

⁴⁾ TC with orifice no. 3, cannot be used for biflow operation.

⁵⁾ Rated capacity is based on:

Evaporating temperature $t_e = +5^\circ\text{C}$, Condensing temperature $t_c = +32^\circ\text{C}$,
Refrigerant liquid temperature $t_l = +28^\circ\text{C}$, Opening superheat OS = 4 K

⁶⁾ For R407C plants, please select valves from the dedicated R407C program

Capillary tube length 0.9 m

Valves with inch connections have 1/4 in. pressure equalisation.

Valves with mm connections have 6 mm pressure equalisation.

Thermostatic expansion valve, types TCAE, TCBE and TCCE

Design/ Function

1. Bulb with capillary tube
2. Thermostatic element with diaphragm
3. Setting spindle for adjustment of static superheat SS
4. Orifice assembly
5. Filter

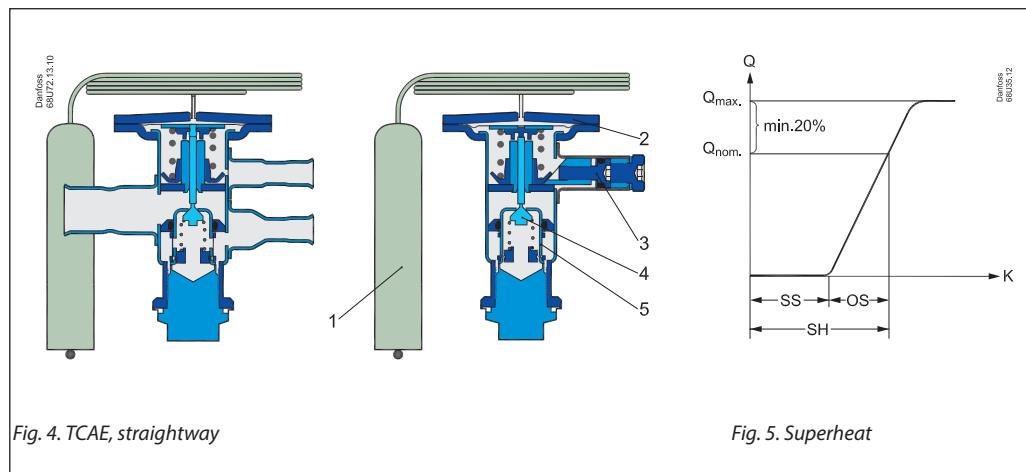

Fig. 4. TCAE, straightway

Fig. 5. Superheat

Superheat, TC

See fig. 5.

- SS = static superheat
 OS = opening superheat
 SH = SS + OS = total superheat
 $Q_{\text{nom.}}$ = rated capacity of the valve
 $Q_{\text{max.}}$ = maximum capacity of the valve

Static superheat SS can be adjusted with setting spindle 3, see fig. 4 (TCAE/TCBE). Static superheat cannot be adjusted on TCCE.

The standard superheat setting SS is 5 K for valves without MOP and 4 K for valve with MOP.

The opening superheat OS is 4 K from when opening begins to where the valve gives its rated capacity $Q_{\text{nom.}}$.

Example

Static superheat	SS = 5 K
Opening superheat	OS = 4 K
Total superheat	SH = 5 + 4 = 9 K

Capacity

Correction for subcooling Δt_{sub}

The evaporator capacity used must be corrected if subcooling deviates from 4 K. The corrected capacity can be obtained by dividing the evaporator capacity by the correction factor given below.

Note:

Insufficient subcooling can produce flash gas.

Correction factor	Δt_{sub}									
	4 K	10 K	15 K	20 K	25 K	30 K	35 K	40 K	45 K	50 K
R22	1.00	1.06	1.11	1.15	1.2	1.25	1.3	1.35	1.39	1.44
R134a	1.00	1.08	1.13	1.19	1.25	1.31	1.37	1.42	1.48	1.54
R404A / R507	1.00	1.1	1.2	1.29	1.37	1.46	1.54	1.63	1.7	1.78
R407C	1.00	1.08	1.14	1.21	1.27	1.33	1.39	1.45	1.51	1.57
R410A	1.00	1.08	1.15	1.21	1.27	1.33	1.39	1.45	1.50	1.56

Example

Refrigerant = R22

Evaporating temperature $t_e = -10^\circ\text{C}$

Pressure drop in valve $\Delta p = 10 \text{ bar}$

Subcooling $\Delta t_{\text{sub}} = 15 \text{ K}$

Evaporator capacity = 18 kW

Correction factor (table) = 1.11

The corrected evaporator capacity thus becomes 18 divided by 1.11 = 16.2 kW

Since the expansion valve capacity must be equal to or lightly more than the corrected evaporator capacity of 16.2 kW, a TC with orifice 1 and a table capacity of 16.3 would be a suitable choice.

Thermostatic expansion valve, type TCAE, TCBE and TCCE

Capacity

Capacity in kW for range N: -40 °C to +10 °C and opening superheat OS = 4 K
